

Testing

1. *Use-Case*
2. *Feedback Form*
3. *Excel Feedback gathered*
4. *Reflection/Action plan document*

1. Use-Case:

- **Description:**

This Program is a simple application that allows users to book something. The program has three input fields: booking name, number of days, and starting date. Once the user enters this information and clicks on the submit button, the program displays the booking name, how many days and the date.

As a tester for a hotel booking program, my task is to ensure that the program is functioning as expected and meets the user's requirements. To test this program, I will perform the following use case.

- **Scenario:**

- The user opens the booking program on their device.
- The user sees the input fields for booking name, number of days, and starting date.
- The user enters the booking name, number of days, and starting date in the corresponding input fields.
- The user clicks on the "submit" button to submit their booking request.
- The program processes the user's booking request and displays the output in the output field.

- **Steps:**

Test the input fields:

- Enter a valid booking name and ensure that it is accepted by the program.
- Enter an invalid booking name (e.g., with special characters) and ensure that the program rejects it.
- Enter a valid number of days (e.g., 2) and ensure that it is accepted by the program.
- Enter an invalid number of days (e.g., a negative number) and ensure that the program rejects it.
- Enter a valid starting date and ensure that it is accepted by the program.
- Enter an invalid starting date (e.g., a date in the past) and ensure that the program rejects it.

Test the submit button:

- Click on the submit button and ensure that the program calculates the total cost of the booking correctly.
- Click on the submit button without entering any information and ensure that the program displays an error message.

Test the output field:

- Ensure that the program displays the booking name, how many days and the date of the booking in the output field.
- Ensure that the program clears the output field after each booking.

- **Post-conditions:**

- The user is able to successfully book something using the program.
- The program accurately calculates the total cost of the booking and displays it to the user.
- The program displays an error message if the user enters invalid input or does not enter any input at all.
- The program displays the booking details, including the booking name, number of days, and starting date, in the output field.
- The output field is cleared after each booking

4. Reflection/Action Plan Document:

- **Reflection:**

I tested a booking program. I encountered unexpected errors and bugs. I used a variety of testing techniques, which helped me uncover issues that may have been missed otherwise.

- **Action Plan:**

Moving forward, I plan to develop my skills in advanced testing techniques, improve my communication skills with the team, and seek out opportunities for learning and professional development.

5. Testing:

Test the input fields:

- Enter a valid booking name and ensure that it is accepted by the program. 
- Enter an invalid booking name (e.g., with special characters) and ensure that the program rejects it. 
- Enter a valid number of days (e.g., 2) and ensure that it is accepted by the program. 
- Enter an invalid number of days (e.g., a negative number) and ensure that the program rejects it. 
- Enter a valid starting date and ensure that it is accepted by the program. 
- Enter an invalid starting date (e.g., a date in the past) and ensure that the program rejects it. 

Test the submit button:

- Click on the submit button and ensure that the program calculates the total cost of the booking correctly. 
- Click on the submit button without entering any information and ensure that the program displays an error message. 

Test the output field:

- Ensure that the program displays the booking name, how many days and the date of the booking in the output field. 
- Ensure that the program clears the output field after each booking.
